

24V But is just
a modified #1 even
if centre connections
are moved so \oplus & \ominus

are not on same battery
set

ALL 4 Batt \ominus LEAD same
length and wire type
and size.

all 4 Batt \oplus leads
same length and
Wire type & size

of course get busses that will
accomodate all the power take offs
and draws. I've only drawn 4 terminals
each. The Busses need to be heavy to
keep interterminal resistance to minimum.
