TIPPERARY is an extremely well built, and well cared for long range, stabilized trawler. The Gardner diesel is known for longevity and economy. Designed and built for the noted California inventor and engineer Vard Wallace, each and every fitting was cast in bronze in his foundry. The hull, professionally built of Ferro-Cement is as fair and smooth as any fiberglass hull. This technology is more than 100 years old, and when built as SRP (Steel Reinforced Plaster) it has many attributes. More of the technology described in FULL SPECIFICATIONS. Just returned from extended cruising in the Gulf Islands. Shown by Appointment

## Sold Comments

Surveyed very well. This will cruise the inside passage again this summer.
